WORK SAMPLES: STRATEGIC OPS & TECH STACK

Marcela Sánchez Vargas | Founding Campus Director Candidate
Strategic Partnerships | Operations | Data-Driven Leadership

EXECUTIVE INTRODUCTION

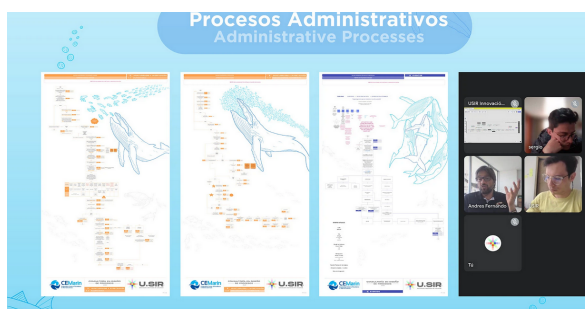

Throughout my career, I have specialized in a critical niche: **translating complex international visions into operational, scalable, and auditable realities**. This portfolio presents selected evidence of my ability to build institutional and entrepreneurial "backbones" from scratch. From managing the rigorous administrative demands of **German-funded scientific consortia (CEMarin/DAAD)** to architecting **AI-driven RevOps** for modern consulting firms (GPMF), my approach remains consistent: **Precision, Transparency, and Technological Innovation**.

The following samples demonstrate my dual capacity to lead high-level consultancy teams and to "roll up my sleeves" to code custom automation and BI solutions that ensure 100% compliance and resource optimization.

1. Institutional Process Engineering (CEMarin)

Visual evidence of auditable workflow design for international fund management (€500k+).

- **Role:** Lead Strategist & Process Owner.
- **The Project:** As Administrative Director of CEMarin, I led the structural design of CEMarin's operational backbone with alignment of multidisciplinary teams through auditable process architecture.
- **Collaboration:** I supervised and collaborated with specialized process consultants to translate our complex institutional bylaws into the visual framework required for auditing.

2. AI-Driven Financial Operations:

Título: Custom AI Accounting Assistant (GPMF Case Study)

- **The Problem:** Client had a 6-month backlog in expense reporting, causing a bottleneck in financial closing.
- **The Solution:** Developed a specialized AI Agent (GPT-based) to automate data extraction from physical receipts.
- **The Logic:** Built-in financial rules for tax calculation (VAT/IVA) and immediate formatting for Google Sheets integration.
- **The Result:** Reduced processing time by 90% and ensured 100% accuracy in data migration for accounting purposes.

Custom AI Infrastructure: Reducing manual data entry by 90% and accelerating the financial closing cycle with zero-error rates

3. Lean Infrastructure & RevOps Automation

Architecting a 'Zero-Touch' Lead Lifecycle using n8n, Zapier, and JavaScript.

- **The Decision:** Prioritized system resilience and data privacy over expensive commercial integrators.
- **Custom Stack:** Built a high-privacy data layer using **Google Apps Script (JavaScript)** to manage the entire lead lifecycle.
- **Routing Logic:** Automated lead validation and distribution, reducing response time by 80% and eliminating manual triage.

Scalable Infrastructure: Custom-coded routing logic for optimized resource allocation." **Workflow:** Webform Capture → JS Script Logic Layer → Intelligent Routing → Automated Notification.

4. Business Intelligence & Real-Time Dashboards

- **Executive Insights:** Developed a suite of BI Dashboards to monitor Institutional KPIs and project-specific profitability.
- **Featured Asset: Dashboard GPMF for Casa Normandia (2026).** This system serves as the operational engine for high-end real estate and hospitality management, tracking sales velocity and resource allocation.
- **Strategic Value:** Centralized data from dispersed sources (CRM, Google Sheets, Finance) to enable real-time decision-making for international boards

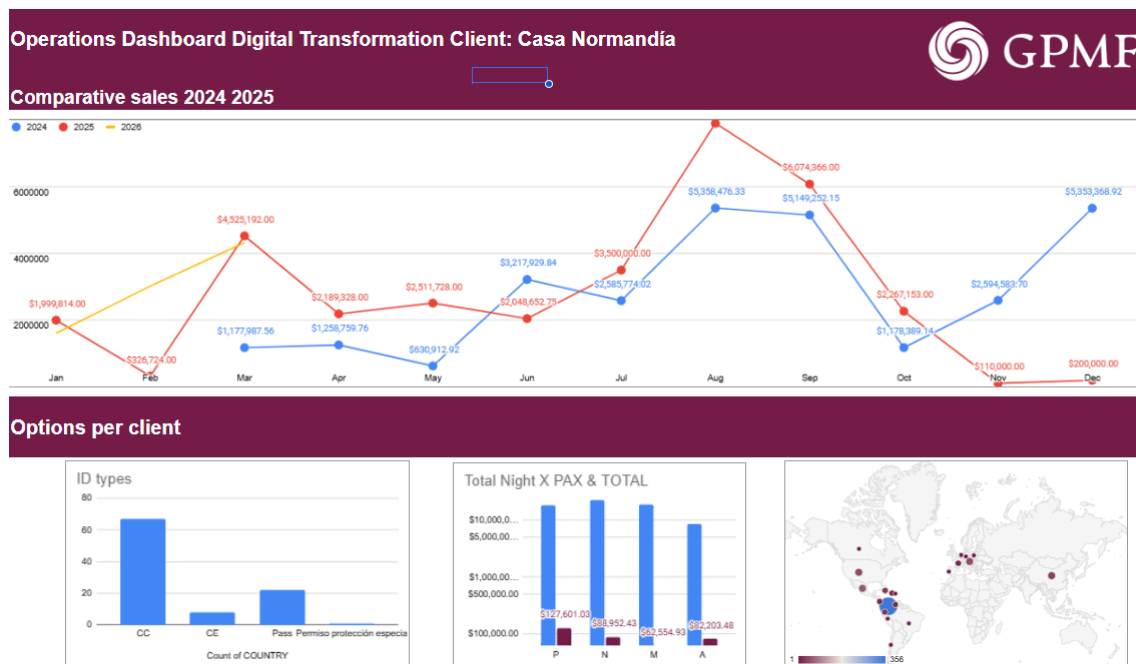

Image 4 :Source: Dashboard GPMF for Casa Normandia. Date: January 2026. Tech Stack: Google Sheets (Backend + Visualization).

Early adoption of Data-Driven Management (DAAD/BMBF reporting logic).

Image 5 :Source: Administrative Framework CEMarin / DAAD Audit Documentation. Date: 2017.Tech Stack: Looker Studio.

5. Continuous Learning: Modern Operations Tech Stack

A commitment to staying at the forefront of digital management.
